| FAULT CURRENT LIMITING FUSES IN SITE DISTRIBUTION BOARD  | Current limiting fuses or a UL/CE certified current limiting circuit breaker MUST be installed if available fault current exceeds 37.5kA.  |  |   |  |  |  |
| RESIDUAL CURRENT MONITORING IN SITE DISTRIBUTION BOARD (OPTIONAL)  | If local regulation requires a residual current monitoring device, it must feature adjustable time delay and adjustable threshold.   |  |   |  |  |  |
| UNDER-VOLTAGE RELAY/SHUNT TRIP<br>RELAY IN SITE DISTRIBUTION BOARD<br>(OPTIONAL)                             | The RTM range includes options for circuitry to locally isolate the charger's power circuit if the safety loop monitor connected to the door switches, tilt sensor, leak sensor or protective earth continuity monitor is triggered.                                     |  |   |  |  |  |
|  | Additionally, the charger can also include options to allow upstream isolations in the event of a safety loop trigger event by including an under-voltage relay coil or shunt trip module on the feeder circuit breaker in the site distribution board.                  |  |   |  |  |  |
|  | Tritium chargers should only be installed by a licensed contractor and a licensed electrician, in accordance with all local and national codes and standards. This may include additional, lockable disconnect mechanisms within line of sight of the supplied equipment |  |   |  |  |  |
